```

Henry/Jiaheng's contribution: found some google images for the database

Deployment:

DATABASE SETUP:

- For database setup, create a postgres user 'james' with the password 'password', and give the user CREATEDB permissions.
- Then, type "*psql -d postgres -U james;*" in a terminal.
- In the postgres terminal, type "*CREATE DATABASE api;*" then connect to it by typing "*\c api*", and then create the tables with the commands:
 - *CREATE TABLE users (id serial PRIMARY KEY, first_name VARCHAR(100) NOT NULL, last_name VARCHAR(100) NOT NULL, email VARCHAR(355) UNIQUE NOT NULL, password VARCHAR(355) NOT NULL, created DATE NOT NULL, family integer NOT NULL, parent boolean NOT NULL);*
 - *CREATE TABLE families (id serial PRIMARY KEY, last_name VARCHAR(100) NOT NULL, images text[], members jsonb, calendar jsonb);*
- postgres should be running on port 5432 on your local machine.

HOW TO START THE UI AND API:

- In a terminal window, start the API by typing *npm install* and *npm start* inside the API directory.

- In a separate terminal, start the UI by typing *npm install*, *npm run build*, and *serve -s build* inside the UI directory. Then go to <http://localhost:5000> (the link will be displayed in the terminal window) in a web browser to view the project.
